FACILITIES MANAGEMENT

1. Introduction

The exponential increase in bed bug infestations within central London has caused significant distress among office workers. Not only are they exposed to potential bed bugs while commuting in public places, but there is also a legitimate concern that their workplace may be infected. The presence of bed bugs in offices, though less prevalent due to footfall, still poses a heightened chance of exposure due to regular occupation of offices. This pressing issue necessitates a proactive and effective solution to alleviate the concerns of office workers and ensure their continued presence in the workplace. MAR Facilities Management presents a workable solution that emphasises the urgency and seriousness of addressing this problem in a timely way and cost-effective way.

2. Background

Bed bugs (*Cimex lectularius*) are tiny blood-sucking insects that have become a widespread issue worldwide. In central London, there has been a surge in bed bug infestations in public places, severely impacting the quality of life for residents and casting a negative light on businesses in the area. Conventional pest control methods often prove ineffective against these resilient pests, highlighting the need for a sustainable and efficient solution to combat the infestation.

3. MAR Facilities Management Solution

MAR Facilities Management proposes an innovative solution that employs eco-friendly products. By utilising the professional-grade insecticide from Bio Productions, our solution effectively controls a broad spectrum of crawling and flying insects, including bed bugs. This unique product not only ensures fast knock-down and kill but also hinders insect reproduction through an incorporated insect growth regulator. Its versatility allows for application in diverse environments, and comprehensive instructions, storage guidance, and contact details are provided.

3.1 Eco-friendly Products

MAR Facilities Management utilises naturally derived substances that have proven efficacy in eliminating bed bugs. Our solution incorporates

these eco-friendly products, which are completely safe for humans, pets, and the environment. This makes them an ideal choice for public places and venues in central London. The Bio Productions insecticide is specially formulated to control various flying and crawling insects, including bed bugs, fleas, mosquitoes, and cockroaches. Its unique triple-action formula combines synthetic and natural pyrethroids for rapid knock-down and kill, while the insect growth regulator prevents breeding. This low-odour, long-lasting product is available in varied sizes and remains active for at least 14 days, effectively eradicating insects emerging from eggs.

3.2 Integrated Pest Management (IPM)

The MAR Facilities Management Solution follows an Integrated Pest Management (IPM) approach. This approach focuses on identifying and addressing the underlying causes of bed bug infestations through a combination of techniques, including thorough inspections and ongoing monitoring. Our experts meticulously inspect infested areas to determine the extent of the problem and locate hiding spots.

4. Benefits of the MAR Facilities Management Solution

Implementing the MAR Facilities Management Solution offers several significant benefits:

4.1 Complete eradication: Complete eradication: Our solution is specifically designed to completely eliminate bed bugs, eradicating the infestation from public places, offices and venues in central London and the Home Counties. By utilising eco-friendly products, we provide a safe and sustainable alternative to traditional extermination methods.

4.2 Minimal downtime: The MAR Facilities Management Solution aims to minimise disruption to businesses by efficiently treating bed bug-infested areas. Compared to conventional methods that require lengthy evacuations due to chemical treatments, our integrated approach ensures a faster turnaround time. MAR Facilities Management treatment would be delivered out of hours so no disruption and in effect no downtime to your daily business activities.

4.3 Reputation preservation: Promptly eradicating bed bug infestations allows businesses to safeguard their reputation and ensure customer satisfaction. With the MAR Facilities Management Solution, public places and venues in central London can provide a clean and comfortable environment, enhancing the overall experience for office workers, residents and building visitors alike.

4.4 Sustainability: MAR Facilities Management is committed to minimising its environmental impact. By employing eco-friendly products, we contribute to a sustainable future.

5. Conclusion

The MAR Facilities Management Solution offers a comprehensive and sustainable approach to address the bedbug infestation in central London. By choosing MAR Facilities Management, businesses can protect their reputation and provide a pest-free environment while contributing to a greener future.
